The first part of the book is devoted to a general
 description of the country, its climate, soil, and
 natural resources. It also contains a detailed
 account of the various tribes and nations
 inhabiting the region, their customs, and
 modes of life.

The second part of the book is a history of
 the country, from the earliest times to the
 present. It traces the progress of the
 various nations, and the changes in their
 political and social condition.

The third part of the book is a description
 of the various cities and towns, and the
 commerce and industry of the country.
 It also contains a list of the principal
 products of the country, and the means
 of transport.

The fourth part of the book is a description
 of the various rivers and lakes, and the
 navigation of the country. It also contains
 a list of the principal ports, and the
 means of communication.

The fifth part of the book is a description
 of the various mountains and hills, and the
 mineral resources of the country. It also
 contains a list of the principal mines, and
 the means of extraction.

The sixth part of the book is a description
 of the various forests and woods, and the
 timber trade of the country. It also
 contains a list of the principal trees, and
 the means of cultivation.

The seventh part of the book is a description
 of the various fisheries and hunting, and the
 animal resources of the country. It also
 contains a list of the principal animals, and
 the means of capture.

The first of these is the...

Handwritten text in the third column of the right page.

Handwritten text in the fourth column of the right page.

1. The square is a quadrilateral with four equal sides and four right angles.

2. The square is a special case of a rectangle and a rhombus.

3. The square is a regular polygon.

4. The square is a convex polygon.

1. The right-angled triangle is a triangle with one right angle and two acute angles.

2. The right-angled triangle is a special case of a scalene triangle.

3. The right-angled triangle is a convex polygon.

1. The scalene triangle is a triangle with three unequal sides and three unequal angles.

2. The scalene triangle is a special case of an acute triangle.

1. The right-angled triangle is a triangle with one right angle and two acute angles.

2. The right-angled triangle is a special case of a scalene triangle.

3. The right-angled triangle is a convex polygon.

1. The diamond-shaped quadrilateral is a quadrilateral with four equal sides and two opposite angles equal.

2. The diamond-shaped quadrilateral is a special case of a parallelogram.

1. The circle is a closed curve that is perfectly round and has a constant radius.

2. The circle is a special case of a closed curve.

3. The circle is a convex curve.

1. A circle is a closed curve...

2. The center of a circle is the point...

3. An ellipse is a closed curve...

4. The radius of a circle is the distance...

5. The circumference of a circle is the length...

6. The area of a circle is given by the formula...

7. The perimeter of a circle is the same as the circumference...

The first part of the book is a history of the
 country from the first settlement to the
 present time. It is a very interesting and
 valuable work, and is well worth a
 perusal. The second part is a history of
 the people, and is also very interesting
 and valuable. The third part is a history
 of the government, and is also very
 interesting and valuable. The fourth
 part is a history of the military, and is
 also very interesting and valuable. The
 fifth part is a history of the navy, and
 is also very interesting and valuable.

The sixth part is a history of the
 commerce, and is also very interesting
 and valuable. The seventh part is a
 history of the education, and is also
 very interesting and valuable. The
 eighth part is a history of the religion,
 and is also very interesting and
 valuable. The ninth part is a history
 of the arts and sciences, and is also
 very interesting and valuable. The
 tenth part is a history of the literature,
 and is also very interesting and
 valuable.

The eleventh part is a history of the
 music, and is also very interesting and
 valuable. The twelfth part is a history
 of the painting, and is also very
 interesting and valuable. The thirteenth
 part is a history of the sculpture, and
 is also very interesting and valuable.
 The fourteenth part is a history of the
 architecture, and is also very interesting
 and valuable. The fifteenth part is a
 history of the engineering, and is also
 very interesting and valuable. The
 sixteenth part is a history of the
 medicine, and is also very interesting
 and valuable. The seventeenth part is
 a history of the law, and is also very
 interesting and valuable. The eighteenth
 part is a history of the politics, and is
 also very interesting and valuable. The
 nineteenth part is a history of the
 philosophy, and is also very interesting
 and valuable. The twentieth part is a
 history of the metaphysics, and is also
 very interesting and valuable.

A circle with center O and a point P outside it. A line segment PO is drawn. A line segment PT is drawn tangent to the circle at point T . A right angle is marked at T .

Theorem: A line is tangent to a circle if and only if it is perpendicular to the radius at the point of contact.

Proof: Let PT be a line tangent to the circle at T . Let OT be the radius. We show $OT \perp PT$.

Assume OT is not perpendicular to PT . Then there exists another point S on the circle such that PS is perpendicular to OT . This contradicts the fact that PT is tangent to the circle at T .

Conversely, if a line is perpendicular to the radius at the point of contact, it is tangent to the circle.

A circle with center O and a point P outside it. A secant line PAB passes through the circle, with A and B on the circle. A tangent line PC is drawn from P to the circle at point C . A right angle is marked at C .

Theorem: The square of the length of the tangent from an external point to a circle is equal to the product of the lengths of the secant segments from that point.

Proof: Consider triangles PAC and PAB . $\angle APC = 90^\circ$ and $\angle PAB = 90^\circ$. $\angle P$ is common. Therefore, $\triangle PAC \sim \triangle PAB$.

From similarity, $\frac{PC}{PA} = \frac{PA}{PB}$, which implies $PC^2 = PA \cdot PB$.

Corollary: If a secant and a tangent are drawn from an external point to a circle, the square of the tangent is equal to the product of the secant and its external segment.
