The first of these is the fact that the  
 world is not a uniform whole, but  
 is divided into many different parts,  
 each of which has its own peculiar  
 characteristics and laws. This is  
 especially true of the human mind,  
 which is capable of receiving  
 impressions from the external world  
 and of forming ideas and opinions  
 based upon them. The mind is  
 therefore a complex and variable  
 entity, and its operations are  
 governed by a variety of factors,  
 including the nature of the  
 impressions received, the state of  
 the mind at the time, and the  
 influence of the surrounding  
 environment.

The second of these is the fact that  
 the mind is not a passive receiver  
 of impressions, but is an active  
 agent in the process of knowledge.  
 It is capable of selecting and  
 organizing the impressions it  
 receives, and of forming a coherent  
 and meaningful picture of the  
 world. This process is known as  
 perception, and it is the foundation  
 of all human knowledge. The mind  
 is therefore an active and creative  
 power, and its operations are  
 governed by its own laws and  
 principles.
